Over a year we've helped organisations save £2.9m worth of water, 976 million litres, that would have been wasted⁺

Automatic meter readings

Getting more from your water meter

Attaching a data logger to your meter upgrades it to automatically delivering reads – without even interrupting your supply.

You get automated meter readings every 15 minutes, sent to your online Smart+ portal. And that's just the start!

With automatic meter readings you can:

- ▶ **See water usage** - for all your sites, in one place.
- ▶ **Manage your water consumption** - monitor water use by time period, to find savings opportunities.
- ▶ **Set up tailored alerts** - immediate warnings of unexpectedly high usage (normally meaning a leak).
- ▶ **Benchmark your sites' water use** against each other, or other similar sized businesses, to see if and how you can improve your usage.

Our online Smart+ portal is easy to use.

- Automatic meter reading data straight to your Smart+ portal.
- 24 hour a day access to view your water use.
- Email notifications warn you about high water use, so you'll never have to worry about water again.
- The portal can show information from multiple on-site meters, and meters from different properties nation-wide. So, wherever your business and no matter how many sites you have, we've got you covered.

Automatic meter readings give you valuable insights for cutting water usage and cost.

⁺Savings will vary depending on the age of the site, condition of the infrastructure, and work already completed.

⁺Based on actual water meter readings for water loss stopped through isolation or repair during 2022. The water is equivalent to around 397 tonnes of CO₂e, with 95% water returned to sewer, based on published Conversion Factors per m³ for water

By monitoring your consumption, we can help you to use water more efficiently, which will save you money, support your CSR activity and help the environment.

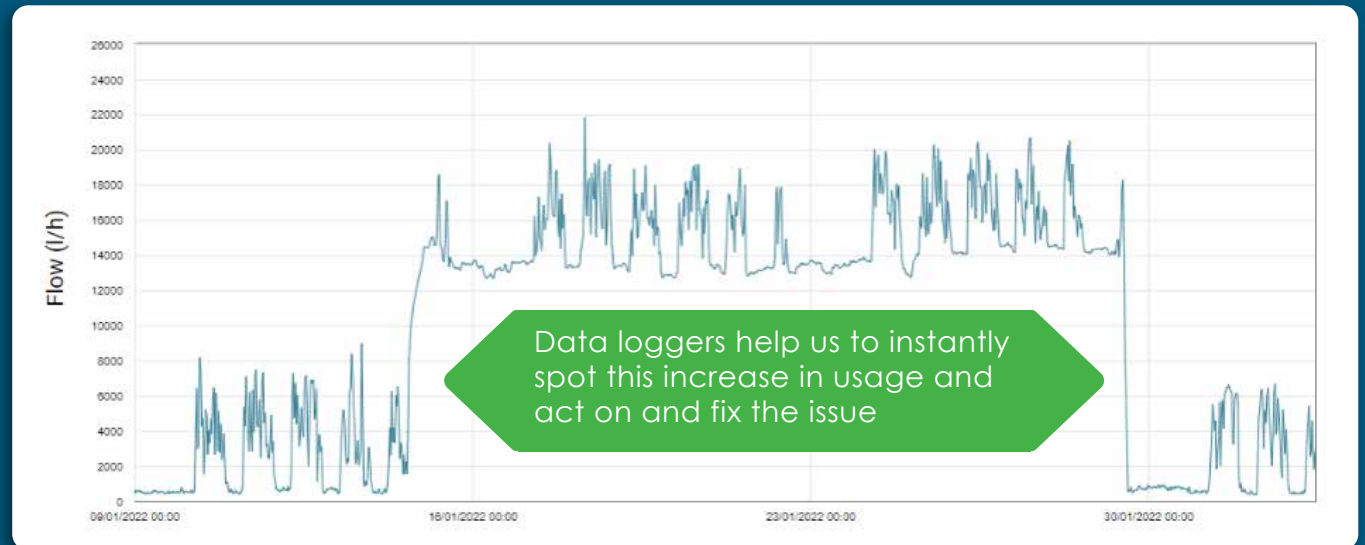

Automatic meter readings making savings for our customers

2,000 lost litres a day saved

at a customer's site in 2023, when our team spotted data logger readings jumping up from 200 litres a day. Swift action to spot, find and fix a hidden leak saved money and water from being wasted.

£3 million of wasted water saved

Data loggers installed on water meters saved around £3 million of water waste being stopped in 2022.

Thank you to the Water Plus team for bringing the water usage to our attention and for their ongoing support and the expert advice they provide. The data logger and online portal are a great help to our operation. Plant Maintenance Engineer, YKK

Water audits

A full water check up for your business

Get our experts on your site for just a day to completely understand every aspect of your business's water use.

You get a unique report with personalised recommendations of how you can save water and make the most cost savings.

After your audit, we might recommend investing in approved water efficiency products, most of which are designed to pay for themselves within a year.

Our water audit work audit work and subsequent installation of water saving kit at Queens Park Care Home, reduced consumption by 79.3% and lowered energy consumption by reducing the amount of water heated at the site.

**It all adds up to better
ways with water.**
